ABOUT US

GENERATING SOLUTIONS

Eastern Generators is a leading Australian power solutions provider with more than 15 years of experience.

We deliver reliable, end-to-end generator services across multiple industries. From emergency response and temporary power, to planned maintenance and custom installations, we provide turn-key solutions designed to keep your critical operations running without interruption.

Our depth of expertise, combined with a highly skilled in-house team of electricians, mechanics, and fitters, allows us to deliver a seamless service - from consultation and design through to installation and ongoing support.

Founded by Managing Director Ben Cresswell, Eastern Generators has evolved from its local beginnings into a trusted partner to some of Victoria's largest commercial, industrial, and infrastructure clients.

Our success is built on responsiveness, professionalism, and a results-driven approach. When our clients face critical power challenges, they know we have the capability, resources, and experience to mobilise quickly and deliver dependable outcomes.

Operating 24/7, our team takes pride in providing tailored, technically sound solutions that ensure confidence, continuity, and performance - every time.

EXECUTIVE TEAM

BEN CRESSWELL

Managing Director / Electrician

Ben has worked extensively with generators over the past 15 years and has a vast array of experience in the industrial, mechanical and construction sectors as a qualified electrical contractor. Ben's knowledge and experience allows him to work closely with customers to ensure that the best outcome is always achieved with every project and application.

DARREN ROCHFORD

Operations Manager / Electrician

Darren has been with Eastern Generators for 8 years working as a lead electrician on install projects. Darren's exceptional communication and project management skills are perfectly suited to his operations role. He holds close relationships with many clients as he goes above and beyond without hesitation.

JAMES HAWKS

Mechanic

From a mechanical perspective, James has extensive experience in the generator and power solutions industry, specialising in service delivery, maintenance operations, and team leadership. He combined his technical expertise with leadership to oversee and manage field technicians, coordinating complex service schedules, and ensuring reliability of critical power systems. With his strong focus on safety and efficiency, he delivers high-quality outcomes for our commercial and industrial clients.

WHAT WE OFFER

GENERATOR HIRE

Eastern Generators provide a genuine 24/7, turn-key generator hire service across Australia. From planning, delivery, electrical connection, fuel management and on-call technicians who can mobilise at any hour to restore your power fast.

Our in-house electricians and generator specialists design the power plan, commission on site, and stay accountable until your operations are back on and stable. It's a turnkey model built for outages, events and planned works where downtime is not an option.

We run a diverse fleet of generators for a wide range of requirements, including a specialist Tecnogen fleet. These are ultra-quiet, high-performance Italian gensets known for their engineered acoustic canopies and efficiency. Critical sites can meet noise and performance expectations without compromise. Our range varies from 20 kVA up to 1,500 kVA, we match the right unit to the application and manage it throughout the hire.

Unlike general equipment hirers, Eastern Generators is a power-only specialist. You get dedicated generator expertise, rapid decision-making, and one accountable team from design to de-mobilisation.

All of our hire fleet operate the ComAp control system, providing real time telemetry and remote monitoring. This helps us diagnose faults quickly, monitor fuel levels and assess running status. All units over 100kVA can be synchronised to run in series to provide redundancy, load bearing and fuel efficiency.

GENERATOR SERVICING

Eastern Generators provides the full-spectrum of servicing for standby and critical-load generator systems. We focus on ensuring your backup power is always ready when you need it.

Whether the generator sits idle most of the time, or is running regularly for test-loads, we can deliver a tailored preventive maintenance program. This may include; load-bank testing, firmware and control-system checks, fuel-condition monitoring, battery inspections and all the mechanical/electrical checks you'd expect from a vendor-agnostic specialist. Because we know your generator is part of your business continuity plan, our servicing contracts are designed to minimise risk, maximise uptime and provide you detailed with service-reporting and audit-ready records.

GENERATOR

DESIGN, SPECIFICATION & SALES

Eastern Generators provide a complete, end-to-end generator design and sales service. We ensure every system we deliver is precisely matched to the operational needs of your facility, today and into the future.

Our team of qualified electricians, mechanics and power specialists conduct detailed load assessments, site inspections, and growth forecasting to determine the optimal generator capacity and configuration. We consider every aspect of your operation, from essential load demands, to potential site expansion and ensure your investment delivers long-term resilience and efficiency.

We work closely with leading global manufacturers, including:

Caterpillar, Cummins, Himoinsa, TecnoGen and other proven brands

We supply generators that meet exact performance, reliability, and compliance standards. Each generator is backed by comprehensive commissioning, testing, and warranty support. The result is a turnkey power solution; expertly designed, professionally installed, and fully supported. You'll have confidence your operations will remain powered, protected, and future-ready.

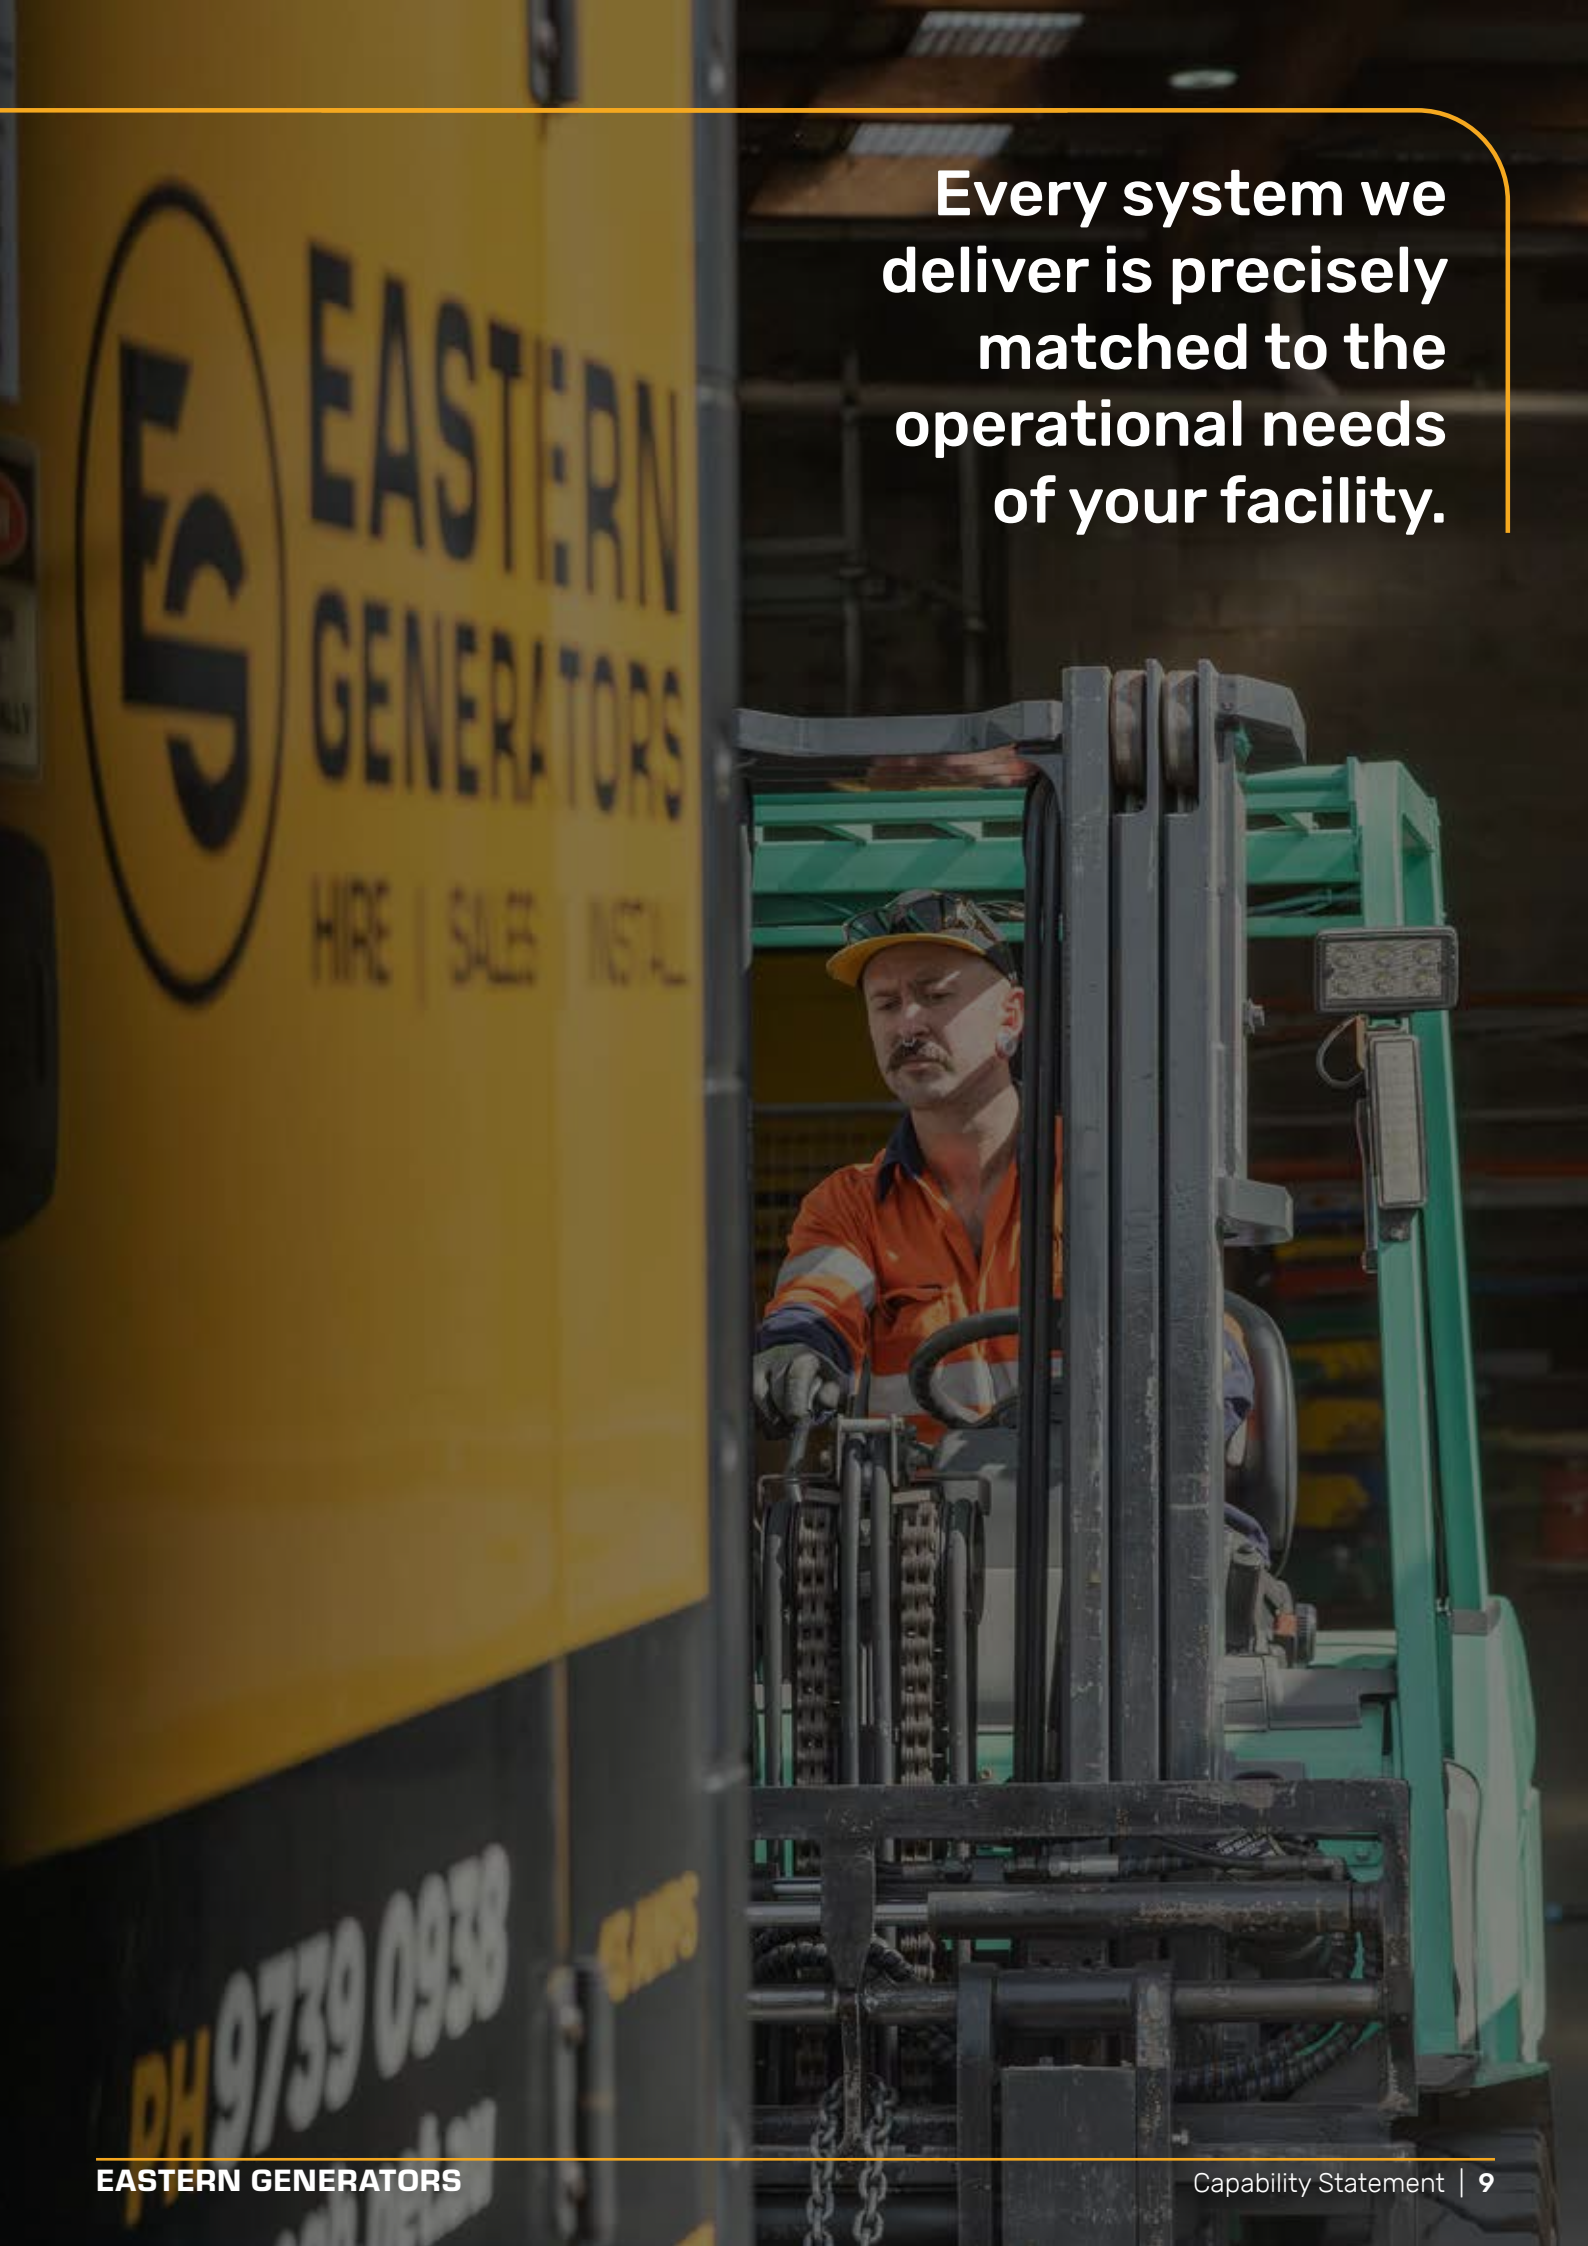

GENERATOR INSTALLATION

Eastern Generators will provide a full installation service – from single-unit setups to complex, site-integrated systems for critical operations. Whether it's part of your permanent installation or a temporary hire arrangement, our in-house team of licensed electricians, mechanics, and fitters manage every stage of the process. This includes site preparation, concrete pad and acoustic enclosure works, fuel system design, cable runs, and all electrical connections through to mains power. We ensure that your installation is compliant, safe, and optimised for efficiency and reliability from day one.

Our installations are supported by advanced generator control and automatic transfer systems that seamlessly manage power changeover between mains and your backup supply. This technology ensures you receive uninterrupted power continuity during outages and smooth transitions once grid power is restored. Your project will be completed to the highest standard; tested, commissioned, and fully documented, so

you have complete confidence that your system is ready to perform when it matters most. Installation isn't just about getting power connected; it's about delivering a robust, intelligent power infrastructure that's built to last.

A man wearing an orange high-visibility shirt and a yellow hard hat is operating a green forklift in a warehouse. In the background, a large yellow sign for 'EASTERN GENERATORS' is visible, with the text 'HIRE | SALES | INSTALL' below it. The sign also features a large 'ES' logo and a phone number 'PH 9739 0938'.

SAFETY

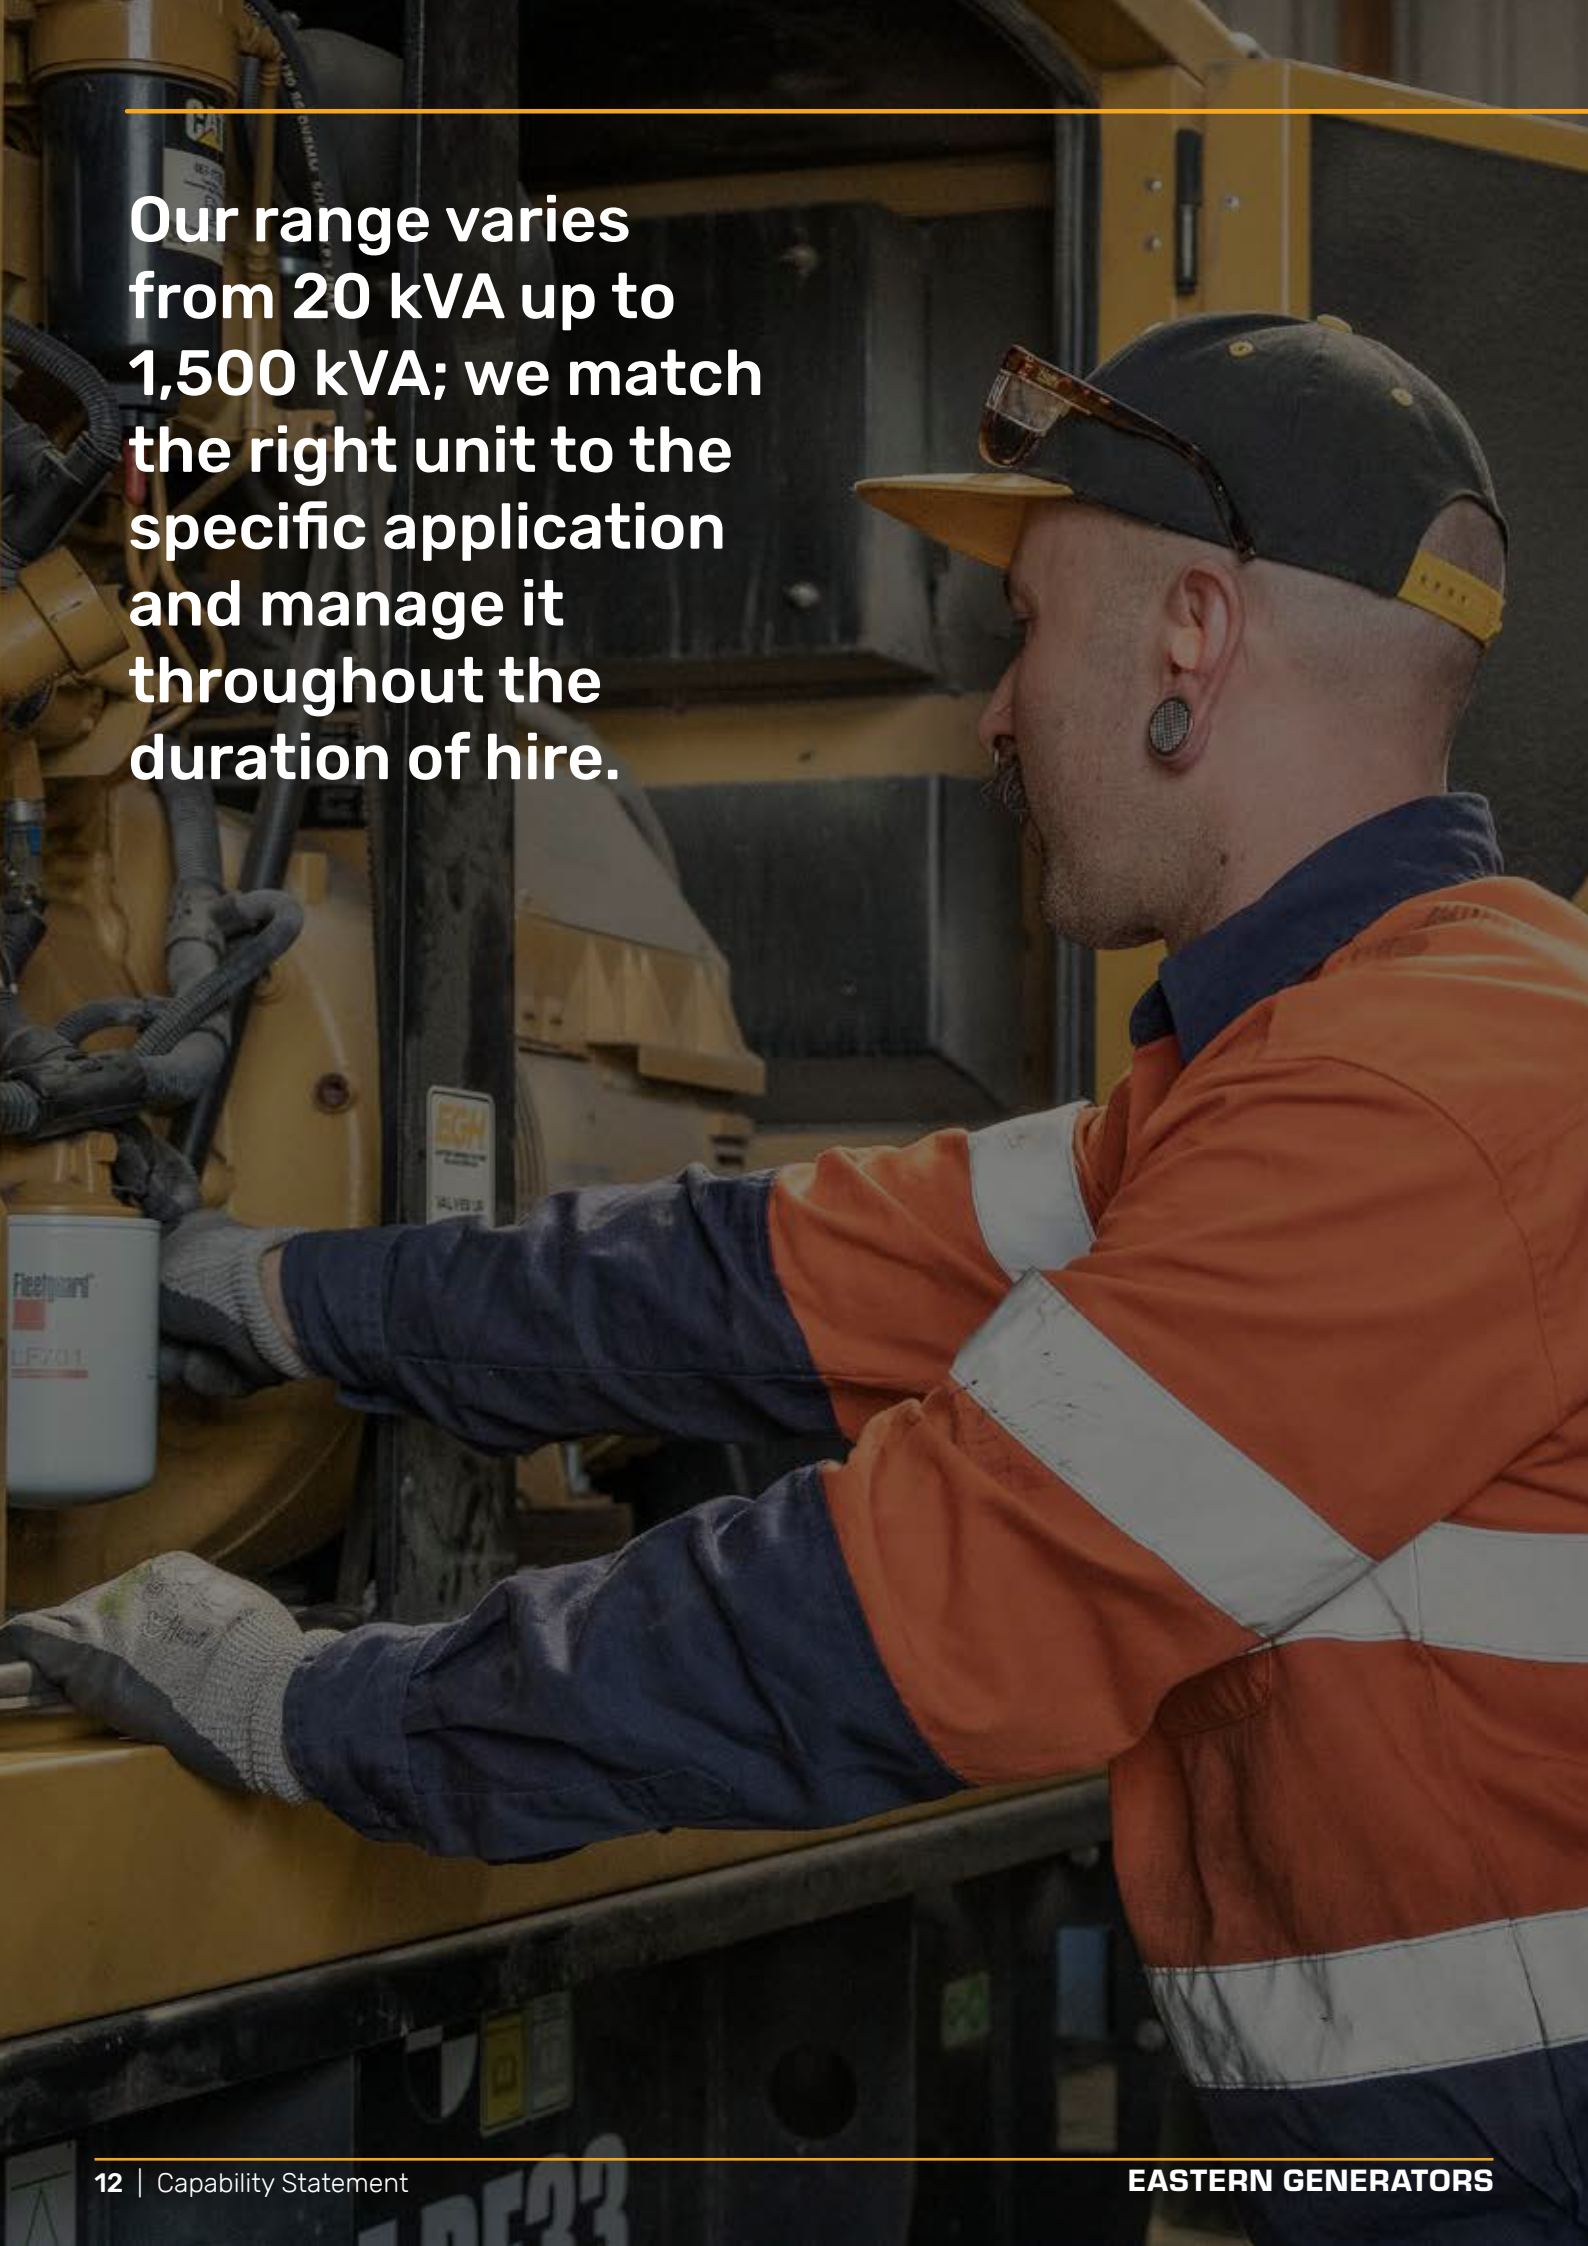

At Eastern Generators, safety is fundamental to everything we do.

Our operations are built around rigorous safety systems that protect our team, your staff, and every person who interacts with our equipment and worksites. We adhere to the highest industry standards and legislative requirements, with detailed risk assessments, safe work method statements (SWMS), and pre-start safety checks forming part of every project - whether it's an emergency response, site installation or routine maintenance.

Our team is trained and certified across electrical, mechanical, and confined-space disciplines, with a focus on proactive hazard identification and control. Every generator deployment is designed and installed to eliminate risk to people and property. This includes clearly marked exclusion zones, compliant cabling and earthing, and systems that ensure safe operation even under demanding conditions. Beyond compliance, we foster a culture where every team member takes ownership of safety, both for themselves and those around them.

Safety isn't just about following procedures - it's about accountability, vigilance, and care.

PROJECTS

AUSTRALIA POST

Location: Perth, Adelaide, Melbourne, Sydney & Brisbane

Scope of Project: Design and supplied 12 x 330kVA to 850kVA backup generators and control systems into parcel and distribution facilities as part of a resilience, risk mitigation project.

BARWON WATER

Location: Greater Melbourne, Werribee West, Victoria

Scope of Project: Supplied and installed 4 x 550kVA synchronised generators, designed and installed ComAp IG500 controls, designed and installed 2 x 10,000L field tanks.

AUSNET SERVICES

Location: Corryong, Victoria

Scope of Project: Supplied and installed 2 x 1,500 kVA super-silent generators with ComAp IG1000 controllers to network specification and 60,000L fuel system for micro grid.

AUSTRALIAN DEFENCE FORCE | VENTIA

Location: Delamere, Northern Territory

Scope of Project: Supplied and installed 3 x 500kVA generators with ComAP IG500 control systems integrated into existing hybrid installation.

ALFRED HOSPITAL | STOWE AUSTRALIA

Location: Prahran, Victoria

Scope of Project: Supplied multiple temporary up to 1,250 kVA for critical backup of intensive care unit during major switchboard upgrades.

CORONER'S COURT | ADJ ELECTRICAL CONTRACTORS

Location: South Melbourne, Victoria

Scope of Project: Supplied and installed 1,500kVA temporary generators due to provide backup to the site whilst mains switchboard upgrades occurred.

BVAQ LABORATORY

Location: Melbourne West Melbourne, Victoria

Scope of Project: Supplied and installed 4 x 550kVA synchronised generators, designed and installed ComAp IG500 controls, designed and installed 2 x 10,000L field tanks and provided ongoing remote monitored maintenance and refuelling.

YARRA VALLEY WATER | VENTIA

Location: Yarra Valley, Victoria

Scope of Project: Scheduled maintenance and breakdown support contract for 100+ client installed generators.

RACV RESORTS

Location: Queensland, NSW, Victoria

Scope of Project: Scheduled maintenance and breakdown support contract for 12 client installed generators.

BROWN BROTHERS WINERY

Location: North-East Victoria

Scope of Project: Supplied and installed 2 x 770 kVA synchronised generators, supplied and installed new generator switchboard with ATS control.

AUSNET

Location: North-East Victoria

Scope of Project: Supplied 24 x 30kVA generators with controls for remote.

RAMSAY HEALTH

Location: Melbourne CBD, Victoria

Scope of Project: Rental of 1,500kVA of temporary power to support the hospital due to a sub-station flood, supplied through 3 x 500kVA super-silent generators with fuel, exhaust and electrical installation.

YARRA VALLEY WATER | VENTIA

Location: Yarra Valley, Victoria

Scope of Project: Rental of generators from 20kVA to 1,500 kVA with 24/7 assistance, including; transport, re-fuelling, servicing and electrical connections.
